INTRODUCTION

The Inuit Land Use and Occupancy Project was designed to be a means by which the Inuit of the Northwest Territories set down that phase of their oral tradition dealing with historic and contemporary man-land, man-water relationships. An immediate objective of the Project is to facilitate comprehensive and effective communication, in respect to this land use, between the Inuit of Canada and people living outside of the North.

Fieldwork in each of 33 northern communities was carried out between July 1973 and July 1974 and had the following main objectives:

- (1) To compile an objective record of the use of the land through each interviewed person's adult life. Such a series of individual records were subsequently aggregated into regional summations of land use.
- (2) To obtain a record of communities' 'ecological' (environmental) knowledge of the areas they have traditionally used and occupied.
- (3) To obtain a record of locations of known cultural, local and historical significance.
- (4) To assemble a global (all data) data-base, on computer tape, comprised of each interviewed individual's land use activity.

Results of objective (1) above, are published in Volumes 1 and 3 of the Report, Inuit Land Use

and Occupancy Project (1976). Together with all records relating to objective (1), information collected in pursuit of objectives (2) and (3) are housed in the Public Archives, Ottawa, though some of these data are published in Volume 1 of the above mentioned report.

The material assembled in connection with objective (4) above, namely the comprehensive land use data base, is published as an Appendix to the Report, Inuit Land Use and Occupancy Project, of which this individual document is a part. Fieldwork methodology and the rationale for compiling a comprehensive data-base are supplied in Volume 2, Report, Inuit Land Use and Occupancy Project, and the interested reader is referred to this publication for detailed consideration of these matters. Here it will suffice to say that a data record consists of a settlement (represented by a community number), an Individual number, Time Period, Land Use classifications, and the geographic location (coordinates) of the particular land use.

A community number is assigned to each of the settlements and Individual numbers assigned by the coders as they begin coding each individual land use map. No Individual is assigned more than one number, even if he has resided in, or parts of his total land use activity occur in, more than one settlement.

An Index is retained by the Project Director, allowing access to any individual's land use biography.

Except for the communities of Gjoa Haven and Holman Island, land use activities were

recorded with respect to not more than three Time Periods. Time Period I relates to the early years of contact with Euro-Canadian society; Period II represents the years when fur-trapping was the basis of the northern economy and Period III the recent 'settlement phase' in the north characterized by a mixed, hunting and wage-employment economy. In the case of Gjoa Haven and Holman Island a fourth Time Period was necessary, due to a locally-perceived significant change during the recent settlement phase.

Each individual map biography returned from the field to the Project offices in Hamilton was sub-divided into 5 x 5 km squares by means of an appropriately marked acetate sheet; only those grid squares in which some land use activity occurred was coded for the data base. The coding procedure is described in a separate report obtainable from the Project Director.

Magnetic tapes are used as a storage medium for the data base, with each settlement's data stored as one of the files on 15 volumes of 2400 magnetic tapes. A set of these tapes is available for use from the Project Director, and a complete file is also housed in the Public Archives, Ottawa.

What follows in this document are tabulations of land use (for each category which was recognized during fieldwork) for each individual interviewed in each of several communities. The computed areas of land use must be regarded as conservative figures, for reasons outlined in the methodology section reported in Volume 2, Report, Inuit Land Use and Occupancy Project.

These settlement data are summarized in Summary Tables, for each time period, and a Participation Rates Table is also provided so that some idea of the representativeness of the values computed can be gauged by the proportion of the local population reporting that given land use activity.

REMARKS: CORRECTIONS

CHESTERFIELD INLET:

Disregard data presented in Individual Land Use tables 367 and 669 (same as data in 672 and 321 respectively).

Summary Table and Participation Rates data require recalculation due to deletion of Individuals 367 and 669.

Similarly Total Number of Respondents in Summary Table and Participation Rates tabulation should now read 29, and Numbers Active in Summary Tables for Periods I, II and III should read 6, 25 and 29 respectively.

WALKER INLET: Delete Land Use Tabulation for Individual 739 (due to accidental loss of field map after coding).

Consequently Total Number of Respondents and Number Active in Period III in Summary Table and Participation Rates tabulations should be entered as 42. Recalculation of values entered in these tables for Period III also necessitated by this change.

REPULSE BAY: Ignore entry for Individual 963 (keypunch error). Total number of Respondents in Summary Tables and Participation Rates tabulation should be entered as 25.

Values (greater than 0) shown in third column of Participation Rates table for Time

Periods I, II and III will be slightly increased as a result of the change in total number of respondents.

SANIKILUAQ: Disregard all data tabulated under land use category 'Settlements'.

From fieldnotes the following information on Settlements should be substituted for values shown in error in the database:

INDIVIDUAL	SETTLEMENTS IN PERIODS I & II	SETTLEMENTS IN PERIOD III	INDIVIDUAL	SETTLEMENTS IN PERIODS I & II	SETTLEMENTS IN PERIOD III
1321	14	1	1335	16	1
1322	16	1	1336	23	3
1323	11	4	1337	8	3
1324	10	10	1338	25	3
1325	11	4	1339	5	1
1326	16	16	1340	11	3
1327	6	7	1341	6	2
1328	11	2	1342	14	2
1329	7	8	1343	7	3
1330	12	9	1344	6	1
1331	11	4	1345	23	1
1332	--	2	1346	3	1
1333	13	11	1347	3	1
1334	10	5	1348	1	6
			1349	14	1

N. B. Computed values for certain land use categories (e.g., freshwater fishing, trapping, wolf hunting) in several individual tabulations that follow appear to be unusually high. These large areas stem from the inland Inuit perception of land use, in which particular territory used for (caribou) hunting is seen to be equally supportive of other, invariably associated, activities (i.e., fishing, trapping, etc.). A detailed discussion of Inuit land use on the Barren Grounds is provided in Volume 2, Pages 69-84, of the Report, Inuit Land Use and Occupancy Project.

The figure consists of two parts. The top part shows a single hexagon with vertices labeled 1 through 6 in a clockwise direction starting from the top-left. The bottom part shows a larger section of the lattice with vertices labeled 1 through 12, illustrating the connectivity between adjacent hexagons.

Abstract—The purpose of this study was to determine if there were differences in the prevalence of musculoskeletal disorders between two groups of nurses working in different departments of a tertiary care hospital. The prevalence of musculoskeletal disorders was determined by means of a self-administered questionnaire among 100 nurses from the intensive care unit (ICU) and 100 nurses from the medical-surgical department. The prevalence of musculoskeletal disorders was significantly higher in the ICU group than in the medical-surgical group ($p < .001$). The prevalence of musculoskeletal disorders was also significantly higher in the ICU group than in the medical-surgical group for each of the following variables: age, years of experience, type of shift, and duration of workday.

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The concentration of the *Agrobacterium* suspension was 10⁶ cells/ml (A), 10⁷ cells/ml (B), 10⁸ cells/ml (C), 10⁹ cells/ml (D), and 10¹⁰ cells/ml (E). The concentration of the *Agrobacterium* suspension was 10⁶ cells/ml (A), 10⁷ cells/ml (B), 10⁸ cells/ml (C), 10⁹ cells/ml (D), and 10¹⁰ cells/ml (E). The concentration of the *Agrobacterium* suspension was 10⁶ cells/ml (A), 10⁷ cells/ml (B), 10⁸ cells/ml (C), 10⁹ cells/ml (D), and 10¹⁰ cells/ml (E).

Figure 1: A schematic diagram of a 2D lattice of atoms. The top part shows a 2D grid of atoms with a central atom highlighted. Below it, a 1D chain of atoms is shown with a central atom highlighted. The bottom part shows a 2D grid of atoms with a central atom highlighted, similar to the top part but with a different arrangement of atoms.

Figure 1 illustrates the experimental setup. A subject is seated at a table, looking at a video screen. The screen displays a horizontal line with a central fixation point and two side points. The subject's hand is positioned near the side points. The diagram is labeled with 'Subject', 'Video Screen', 'Fixation Point', and 'Side Points'.

Figure 1: A schematic diagram of a 1D lattice chain. The chain consists of two parallel rows of particles. The top row contains blue circles, and the bottom row contains red circles. The particles are connected by horizontal lines, representing interactions. The chain is labeled "1D Lattice Chain" at the top.

REVIEW: EX

OF LAY: USE

270

p. 3108 II:

A 10x10 grid of 100 small squares, each containing a number from 1 to 100 in a random order. The numbers are arranged in a way that suggests a magic square, where the sum of numbers in each row and column is constant.

REVISED:

**TOTAL WATER FISH
TERRITORY WHALES/BIRDS/EGGS**

[illegible][illegible]

A 10x10 grid of 100 small, stylized human figures arranged in 10 rows and 10 columns. The figures are white and have a simple, rounded shape. They are arranged in a way that suggests a crowd or a group of people. The grid is labeled with letters and numbers along the top and left sides.

100 N. 5TH ST. NEW YORK, N.Y. 10017

A 10x10 grid of 100 small, colorful, abstract shapes arranged in a pattern that resembles a barcode or a stylized letter 'E'. The shapes are primarily white with various colored outlines and internal details. The colors include red, blue, green, yellow, and black. The shapes are arranged in a way that they form a larger, stylized 'E' shape in the center of the grid.

 BEAR 300

A 10x10 grid of dots. A 3x3 square of dots in the center is shaded gray. The grid is composed of 10 rows and 10 columns of dots. The central 3x3 area, consisting of dots at rows 4-6 and columns 4-6 (using 1-indexing from top-left), is highlighted with a gray background.

Figure 1 illustrates the experimental setup. A subject is seated at a table, looking at a video screen. A video camera is positioned above the screen. A horizontal bar is placed between the subject and the screen. The screen displays a target (a small circle) and a starting point (a small circle). The bar is labeled 'Bar' and the screen is labeled 'Video screen'. The camera is labeled 'Video camera'.

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The number of transformed cells was determined by the number of colonies obtained on the selective medium. The results are the mean of three independent experiments. Error bars represent the standard deviation.

A 10x10 grid of 100 small, stylized, abstract shapes, possibly representing a barcode or a data visualization. The shapes are arranged in a regular pattern, with each shape having a unique, somewhat irregular form. The colors are primarily black and white, with some grey tones. The overall effect is a dense, textured pattern that resembles a barcode or a data visualization.
